

## Triforine Rose Spray

Sharp Shooter

- Systemic-gets into sap stream of plant
- Environmentally friendly, safe for people and the environment
- Acts as both a preventative and a curative
- Low Toxic - Will not harm the bees and predatory mites
- Does not persist in the environment

**Controls Diseases:** Black Spot, Powdery Mildew and Rust

**For use on:** Roses (all types)

**When to use:** Spray whenever disease is visible, also start an early preventative spray program at the beginning of Spring once foliage emerges

Triforine is a systemic fungicide which enters the sap of the plant to protect and cure it of fungal disease. The long lasting systemic protection has made Triforine a traditionally popular choice for the home gardener. This very popular rose fungus killer is favoured by most professional horticulturists for the control of fungus disease on roses.
